

POLE VAULT TROUGHS

PRODUCT DATA

The photo shows a wedge type trough on the left. This has a stronger reinforced lid which is recessed for application of a surface, which when removed allows the wedge to be located into place to maintain the correct slope on the trough.
The photo on right is of a normal pole vault trough which can either be supplied with a flush fitting lid or a recessed lid to accept a surface. The troughs are made from steel and then galvanised.

Complies with UKA Specification
